Easy to fit and with no external condensers, the *Single* makes quick, efficient and affordable air conditioning available to everyone

Designed to suit a range of environments including hotel bedrooms, small offices and conservatories.

The Single provides an efficient air conditioning solution due to its all-in-one compact design. Fitting neatly underneath a windowsill on-its-own, it does not require any separate outdoor unit or associated pipework like most air conditioners. The Single can be installed entirely from within the room and is capable of cooling and heating an area of up to 250 ft² (23m²). All from a standard 13amp electric supply.

- Unique design with no external condensers or pipework
- Maintains visual integrity of building façade
- Fully installed from within the room
- User friendly electro-mechanical controls for instant change from cooling to heating
- Quiet operation for night time use
- Dehumidifies as it cools

The Single could not be more straightforward, it does not require any special skills to install and provides a very economical solution to air conditioning problems, particularly where planning permission for siting external condensers is a major consideration.

The competitive price of the Single makes air conditioning affordable with the extra advantage that it can be installed one room at a time without major disruption, allowing additional units if required to be added to suit your budget.

Technical Specification

Cooling	kW	2.3
	Btu	8000
Heating	kW	1.4
	Btu	4800
Noise level	dbA	38
Dimensions		
Width	mm	700
Height	mm	600
Depth	mm	275
Weight	kg	40
Fan speeds	-	2
